Chapter 17. From Gene to Protein. Lecture Outline. Overview: The Flow of Genetic Information. The information content of genes is in the form of specific sequences of nucleotides along the DNA strands. The DNA inherited by an organism leads to specific traits by dictating the synthesis of proteins and of RNA molecules involved in protein synthesis. Gene expression, the process by which DNA directs protein synthesis, includes two stages called transcription and translation.

### CHAPTER 17 FROM GENE TO PROTEIN

AP Biology Chapter 17. Gene Expression. Transcription. Messenger RNA (mRNA) Translation. process by which DNA directs synthesis of proteins. -synthesis of RNA under direction of DNA... -DNA serves as templa.... RNA molecule that carries genetic message from DNA to protein....

ap biology chapter 17 viruses Flashcards and Study Sets ...

To study or manipulate nucleic acids, the DNA or RNA must first be isolated or extracted from the cells. Various techniques are used to extract different types of DNA ( Figure 17.2 ). Most nucleic acid extraction techniques involve steps to break open the cell and use enzymatic reactions to destroy all macromolecules that are not desired (such as degradation of unwanted molecules and separation from the DNA sample).
