Climate Change: Past, Present, and Future
Posted on 30 September 2010 by John Cook. I love a simple, accessible graph that tells a clear story. A good example can be found in a new paper Climate Change: Past, Present, and Future (Chapman & Davis 2010). They plot past climate change over the past 1000 years together with what we can expect to experience over the next century.

Climate Change: Past, Present, and Future
We stress that past, present, and future climatic variation are important ecological and evolutionary forces that shape the sensitivity and response capacity of populations under climate change. Indeed, the predictions we present here are only a subset of the ways in which climatic variation affects vulnerability.
