Debraj Ray, one of the most accomplished theorists in development economics today, presents in this book a synthesis of recent and older literature in the field and raises important questions that will help to set the agenda for future research. He covers such vital subjects as theories of economic growth, economic inequality, poverty and undernutrition, population growth, trade policy, and the markets for land, labor, and credit. A common point of view underlies the treatment of these subjects: that much of the development process can be understood by studying factors that impede the efficient

and equitable functioning of markets. Diverse topics such as the new growth theory, moral hazard in land contracts, information-based theories of credit markets, and the macroeconomic implications of economic inequality come under this common methodological umbrella. The book takes the position that there is no single cause for economic progress, but that a combination of factors--among them the improvement of physical and human capital, the reduction of inequality, and institutions that enable the background flow of information essential to market performance--consistently favor

development. Ray supports his arguments throughout with examples from around the world. The book assumes a knowledge of only introductory economics and explains sophisticated concepts in simple, direct language, keeping the use of mathematics to a minimum. Development Economics will be the definitive textbook in this subject for years to come. It will prove useful to researchers by showing intriguing connections among a wide variety of subjects that are rarely discussed together in the same book. And it will be an important resource for policy-makers, who increasingly find themselves

What guidance does academic research really provide to economic policy development? The critical and analytical surveys in this volume investigate links between policies and outcomes by surveying work from broad macroeconomic policies to interventions in microfinance. Asserting that there are no universal correspondences between policies

and outcomes, contributors demonstrate instead that only an intense familiarity with the development context and the universe of applicable economic models can generate successful policies. Getting cause-and-effect right is essential for policy design and implementation. With the goal of drawing researchers and policy makers closer, this volume highlights our increasing understanding of ways to combine economic theorizing with careful, thoughtful empirical work. * Presents an accurate, self-contained survey of the current state of the field * Summarizes the most recent discussions, and

Nafziger explains the reasons for the recent fast growth of India, Poland, Brazil, China, and other Pacific Rim countries, and the slow, yet essential, growth for a turnaround of sub-Saharan Africa. Following the 2007–2009 financial and economic crises, there has been an unprecedented demand among economics students for an alternative approach, which offers a historical, institutional and multidisciplinary treatment of the discipline. Economic development lends itself ideally to meet this demand, yet most undergraduate textbooks do not reflect this. This book will fill this gap, presenting all the core material needed to teach development economics in a one semester course, while also addressing the need for a new economics and offering flexibility to instructors.

Rather than taking the typical approach of organizing by topic, the book uses theories and debates to guide its structure. This will allow students to see different perspectives on key development questions, and therefore to understand more fully the contested nature of many key areas of development economics. The book can be used as a standalone textbook on development economics, or to accompany a more traditional text.

book, the first intellectual biography of Lewis, Robert Tignor traces Lewis's life from its beginnings on the small island of St. Lucia to Lewis's arrival at Princeton University in the early 1960s. A chronicle of Lewis's unflinching efforts to promote racial justice and decolonization, it provides a history of development economics as seen through the life of one of its most important founders. If there were a record for the number of firsts achieved by one man during his lifetime, Lewis would be a contender.
