~~Eva Era Africana Universale Gallucci~~

Veniamo tutti dall'Africa. Lo hanno scoperto gli scienziati percorrendo a ritroso la storia genetica dell'umanità, trasmessa solo per via femminile. Oggi in quel continente le ragazze subiscono più che altrove le conseguenze della miseria e dell'ignoranza. Con la scuola, Internet e il loro entusiasmo il futuro sarà migliore.

Non è la cecità che viene qui presa in giro: è la Cecità con Corona d'Alloro Sopra le Pupille Spente. Altan prende in giro tutta la serie di luoghi comuni sul Cieco quale Eroe o quale Vittima, tutta la letteratura pompieristica di contorno, la stessa che fa al giorno d'oggi definire i ciechi Non Vedenti, quasi che la parola "cieco" fosse una parola sporca. (Dalla prefazione di Ferruccio Alessandri)

Hanno dovuto lottare contro i pregiudizi e il maschilismo per poter studiare ed entrare nei laboratori. Hanno rischiato di vedersi strappare le loro scoperte fondamentali, spesso attribuite ai soli colleghi uomini. Sono state capaci di caricarsi del doppio impegno della famiglia e della ricerca. Rita Levi-Montalcini ci racconta 70 donne eccezionali e ce le indica come esempi di emancipazione, genio e perseveranza. Le loro conquiste sono state per sempre.

This Element focuses on Latin American fossil fuel producer countries and how they are dealing with the transition towards a greener energy matrix. The challenges involved are multiple and ethical in substance. In particular, a worldwide expansion in clean energies would reduce climate change, physical risks. A rapid transition, however, induces the irruption of a new (financial) risk. The energy transition, in addition, could be thought of as a new arena for political disputes. Finally, it evaluates the relevance of monetary policy and financial regulation to tackle the issue from a macro perspective. Energy transition, however, have also long-term but uncertain consequences on the national economy. Henceforth, and in order to minimize risks, a long-term, strategic vision of the challenge confronted by the region becomes mandatory. To tackle all these problems, this Element profits from contributions of different disciplines.

The autobiography of Levi-Montalcini, who won the Nobel Prize for Medicine in 1986. Born in Torino into a middle-class Jewish family, she experienced the rise of fascism and antisemitism in the 1930s-40s (discussed on pp. 73-105). After the promulgation of the racial laws in 1938, it was impossible for her to pursue research at the Neurological Clinic and she continued her work in private. She survived the war hiding in a small town in Italy and later emigrated to the United States.

This cultural history of Mussolini's dictatorship discusses the meanings of modernity in interwar Italy. The work argues that fascism appealed to many Italian intellectuals as a new model of modernity that would resolve the European and national crises.

A modern classic for readers of THE BORROWERS - about eleven-year-old Edie Winter and her magical box of winged people that only children can see. When eleven-year-old Edie Winter finds a mysterious shoebox on the London Underground she's amazed to discover that it's home to a family of Flits - tiny winged people. But Impy, Speckle and Nid need Edie's help. Not only do they need supplies (rice crispies, sugar sprinkles, digestive biscuits and raisins) and someone to look after them, but their brother Jot has run away and they need Edie's help to find him. Set against the backdrop of London and its Underground network, EDIE WINTER AND THE BOX OF FLITS is a story about friendship, family and noticing the little things in life. With stunning black and white artwork throughout.

This volume is a collection of articles written by Nobel Laureate Rita Levi-Montalcini and published from 1942 to 1995. Studies described in the first part set the stage for the discovery of a protein molecule which became known as the Nerve Growth Factor (NGF), described in detail in the second part. The NGF synthesized in minute amounts in all vertebrate tissues, plays an essential role in the differentiation and survival of several nerve cell populations in the peripheral and central nervous system. The discovery of the NGF was defined by the Nobel Foundation as a milestone in developmental neurobiology, and the author was awarded in 1986 with this prestigious award. Studies pursued in subsequent years and still in progress, have unveiled other fundamental properties of the NGF, described in the third part of this volume.
