Yes.f1.13 A formula to estimate the
volume rate of flow, Q , flowing over a
dam of length, B , is given by the equation
 $Q = 3.09BH^{\frac{3}{2}}$ where H is the depth of the
water above the top $Q= 307 BH$ of the
dam (called the head). This formula gives
 Q in ft^3/s when B and H are in feet.

This Student Solutions Manual is meant to accompany Fundamentals of Fluid Mechanics, which is the number one text in its field, respected by professors and students alike for its comprehensive topical coverage, its varied examples and homework problems, its application of the visual component of fluid mechanics, and its strong focus on learning. The authors have designed their presentation to allow for the gradual development of student confidence in problem solving.

Expands on the basic analysis methods generally used to solve or to begin solving fluid mechanics problems. Concludes with additional important notions such as boundary layers, transition from laminar to turbulent flow, turbulence modeling and chaos and flow separation. Presents 165 examples that provide detailed solutions to a variety of problems.
