The intelligent drives in the 9300 range are ideally suited to independently control sub-processes within a machine. Starting from precustomised standard applications, individual extensions are easy to implement with the help of freely connectible function blocks – which reduces the load on the control system and facilitates modular machine design.

Servo motors For precise yet demanding motion sequences. Servo motors are designed for all applications requiring precision and dynamic performance. Our servo motors have been designed to work in perfect harmony with our inverters. Such a combination results in exact, recurring motion sequences delivered by perfectly coordinated return systems.
