Research and development (R&D) intensity (expenditure on R&D as a percentage of Gross Domestic Product, GDP) in the OECD area rose from 2.34% in 2017 to 2.38% in 2018, according to the latest data published on 5 August 2020 in the OECD Main Science and Technology Indicators (MSTI) database. This increase, which follows a similar rise between 2016 and 2017, was driven by faster real growth in R&D expenditure (+3.9%) compared to GDP (+2.3%).

### Main Science and Technology Indicators - OECD

Improving Measures of Science, Technology, and Innovation makes recommendations for near-term action by NCSES along two dimensions: (1) development of new policy-relevant indicators that are based on NCSES survey data or on data collections at other statistical agencies; and (2) exploration of new data extraction and management tools for generating statistics, using automated methods of harvesting unstructured or scientometric data and data derived from administrative records.

### Developing Science Technology and Innovation Indicators ...

Executive summary Measuring science, technology and innovation (STI) is fundamental for the formulation of national innovation strategies. The absence of relevant indicators is often a mayor obstacle for the design and implementation of STI policies in developing countries.

### science, technology and innovation Note prepared by the ...

While R&D intensity and other R&D indicators are used to monitor progress toward SDG 9, a broader perspective is needed to assess the full contribution of R&D and innovation to the SDGs. Public funding of R&D is often needed to support the development of radically new solutions that help attain more than one objective at once.

### OECD Main Science and Technology Indicators

A proposal of an indicator system for science technology and innovation In last decades, scientific culture has become a key element of Governance of Science, Technology and Innovation in the countries where it is important to determine measurement to analysis trends on scientific culture.

### Science, Technology and Innovation indicators

A key component of this undertaking is the Science, Technology and Innovation Policy (STIP) Review programme that provides tailored technical support to countries in assessing national STI systems and designing or reframing national STI policies and plans.

### A Framework for Science, Technology and Innovation Policy ...

The Centre for Science, Technology and Innovation Indicators adapts best practice international methodologies for measurement of science, technology and innovation (STI) indicators. Surveys we conduct on a regular basis include: South African National Survey of Research and Experimental Development (R&D Survey) South African Business Innovation Survey

### Centre for Science, Technology and Innovation Indicators

Science, Technology and Innovation (STI) indicators are critical in monitoring Africa's scientific and technological development. These indicators are useful for formulating, adjusting and implementing technology and innovation policies and strategies. Indicators can also be used to monitor global technological trends, conduct foresight exercises, and determine specific areas of investment.

### African Science Technology and Innovation Indicators ...

The important product innovation indicators are the number of new product ideas (Cooper and Kleinschmidt, 1993), future duration of products (Astebro and Michaela, 2005), and number of project definitions with business approval (Tipping et al., 1995). To evaluate ideas for innovations, these indicators may play an important role in the product definition and concept phase.
