differentiability by giving a thorough grounding on analytic functions and their relations with harmonic functions. In addition, the book introduces the exponential function of a complex variable, and with the help of this function, defines trigonometric and hyperbolic functions and explains their properties. While discussing different mathematical concepts, the book discusses a number of theorems such as Cauchy's integral theorem for the integration of a complex variable, Taylor's theorem for the analysis of complex power series, the residue theorem for evaluation of residues, the argument principle and Rouché's theorem for the determination of the number of zeroes of complex polynomials. Finally, the book gives a thorough exposition of conformal mappings and develops the theory of bilinear transformation.

Between 2012 and 2013, Mali has gone through the most challenging period of its history as a nation-state. From a praised democracy, the country almost collapsed after the onset of a complex set of rebellions that threatened to divide or completely erase it from the map. This book provides a three-dimensional analysis of the conflict drivers as well a deep assessment of the conflict resolution mechanisms that were set up to restore Mali control over its territory. From the outbreak of MNLA insurgent attacks in early 2012, the crafting of AZAWAD, the fluidity of MNLA alliance with ANSAR DINE, MUJAO and AQIM, the coup d'état of Sanogo and
