By assembling the first comprehensive dictionary of Key Performance Indicators (KPIs) for Education and Training, The KPI Institute provides professionals a useful resource for novices and experts alike. It can be used in the early stages of implementing a performance management framework, in the process of selecting and documenting KPIs, but also to improve an existing performance measurement system. The KPI taxonomy presented in the dictionary covers all major functions of the Education and Training Department, such as: - Academic Education- Colleges and Universities- Training and Other Education

This book is the first monograph to systematically introduce readers to technology and vocational education and training in ASEAN countries. It details the current state of development and key development trends regarding technology and vocational education and training in the ten ASEAN countries. For each ASEAN country, the book addresses the history, status quo, characteristics, reform and development trends in technology and vocational education and training. The content mainly focuses on technology and vocational education and training systems, vocational qualification frameworks, technology and vocational education and training related personnel, etc. All the latest data presented here is drawn from the newest official website and research reports, accurately reflecting the development status of ASEAN countries and helping us make better forecasts regarding its future. This book offers a valuable reference guide for academic research in technology and vocational education and training. It can also be used as a textbook for postgraduate courses in technology and vocational education and training, as well as training material for various vocational education teachers and managers.

This book focuses on the importance of human factors in optimizing the learning and training process. It reports on the latest research and best practices and discusses key principles of behavioral and cognitive science, which are extremely relevant to the design of instructional content and new technologies to support mobile and multimedia learning, virtual training and web-based learning, among others, as well as performance measurements, social and adaptive learning and many other types of educational technologies, with a special emphasis on those important in the corporate, higher education, and military training contexts. Based on the AHFE 2019 Conference on Human Factors in Training, Education, and Learning Sciences, held on July 24-28, 2019, in Washington D.C., USA, the book offers a timely perspective on the role of human factors in education. It highlights important new ideas and will fosters new

discussions on how to optimally design learning experiences.

Faculty in all disciplines must continually prioritize their time to reflect the many demands of their faculty obligations, but they must also prioritize their efforts in ways that will improve the prospects of career advancement. The current perception is that research contributions are the most important measure with respect to faculty promotion and tenure decisions, and that teaching effectiveness is less valued--regardless of the stated weighting of research, teaching and service. In addition, methods for assessing research accomplishments are well established, even though imperfect, whereas metrics for assessing teaching, learning, and instructional effectiveness are not as well defined or well established. Developing Metrics for Assessing Engineering Instruction provides a concise description of a process to develop and institute a valid and acceptable means of measuring teaching effectiveness in order to foster greater acceptance and rewards for faculty efforts to improve their performance of the teaching role that makes up a part of their faculty responsibility. Although the focus of this book is in the area of engineering, the concepts and approaches are applicable to all fields in higher education.

This best practice guide to teaching in the Further Education and Skills sector, and professional organisational learning contexts, examines the key concepts underpinning effective teaching and learning and combines this with case studies which demonstrate meaningful connections between theory and practice. Each chapter also contains discussion questions, learning activities and reflective points, allowing you to further engage with key research and relate it to your own teaching. Offering pragmatic advice on learning design, support and delivery, coverage includes: Identifying learning needs and objectives Selecting and developing appropriate content Using technology to enhance learning Assessment, evaluation and reflection This is an indispensable resource for

anyone preparing to teach in Further Education, current Higher Education lecturers and work-based learning trainers in private and public-sector organisations. Lyn Ashmore is a Senior Lecturer in the School of Education and Professional Development and Denise Robinson is Director of the Post Compulsory Education & Training Consortium, both are based at the University of Huddersfield.

This book constitutes the proceedings of the 3rd International Conference on E-Learning, E-Education, and Online Training, eLEOT 2016, held in Dublin, Ireland, August 31 – September 2, 2016. The 25 revised full papers presented were carefully reviewed and selected from 35 submissions. They focus on topics as augmented reality learning, blended learning, learning analytics, mobile learning, virtual learning environments.

Instructional Design for ELearning: Essential guide to creating successful eLearning courses is a powerful yet concise how-to resource to instructional design for eLearning, and a key tool for aspiring, new, and experienced instructional designers. If you need a basic understanding of what instructional design for eLearning is, this book is for you. The text includes comprehensive tables, questionnaires, checklists, templates, and other helpful visuals. In the Instructional Design for ELearning, you will discover how to apply the key principles behind creating engaging materials that enable your audience to both gain and retain the knowledge and skills they are being taught.

Today's software companies can't afford to be passive with their customers. As software moves to the web and becomes more consumerized, software companies can only grow if their current customers renew and grow over time. Otherwise those customers will leave, creating a "leaky bucket" of revenue.So, what are smart, innovative companies doing before they end up with severe churn problems? Forward-thinking companies invest in Customer

Education early as a way to drive customer growth and maximize lifetime value in a scalable way. Over time, this function has the potential to differentiate a company in the market.Consider this book a survival guide to investing in a Customer Education function, including: -How to drive a Customer Education strategy across your customer lifecycle-Tips for creating killer content that will actually lead to customer performance-What tools to implement as part of your technology stack-Measurement strategies for improving your content and showing ROI-And more...

By assembling the first comprehensive dictionary of Key Performance Indicators (KPIs), The KPI Institute provides professionals a useful resource for novices and experts alike. It can be used in the early stages of implementing a performance management framework, in the process of selecting and documenting KPIs, but also to improve an existing performance measurement system. The KPI taxonomy presented in the dictionary covers 25 different economic activities, by illustrating industry specific KPIs: Agriculture Arts and Culture Construction and Capital Works Customs Education and Training Financial Institutions Government - Local Government - State / Federal Healthcare Hospitality and Tourism Infrastructure Operations Manufacturing Media Non-profit / Non-governmental Postal and Courier Services Professional Services Publishing Real Estate / Property Resources Retail Sport Management Sports Telecommunications / Call Center Transportation Utilities Some of these KPIs can be used at strategic levels, while others can be monitored at operational level given the particularities of operations.

Variability in care in emergency surgery is well known, particularly in abdominal surgery, and reducing it is fundamental to improving outcomes. It is therefore vital to identify the factors that are key to improving mortality and reducing complications in various surgical

emergencies. Under the leadership of the World Society of Emergency Surgery, over 200 leading experts in emergency surgery, critical care and surgical infections established a template to help define and optimise emergency surgery, particularly that relating to the abdomen. This book refines this initial work, crystallising it into a meaningful resource for practising surgeons and health care administrators alike, and paving the way for advances in emergency surgery around the globe. This book sets a benchmark for Emergency Surgery and is a must read for those wanting their patients to do better.
