Many people have become very rich in the commodity markets. It is one of a few investment areas where an individual with limited capital can make extraordinary profits in a relatively short period of time. Commodities are agreements to buy and sell virtually anything that is harvested except onions. (A 1958 federal law prohibits trading onions.) Such goods are raw or partly refined materials whose value mainly reflects the costs of finding or gathering them. They are traded for processing or incorporation into final goods. Examples are crude oil, cotton, rubber, grains, and metals and other minerals. Since it is impractical to transport these bulky, often perishable materials, what is actually traded are commodities futures contracts, or options, that are agreements to buy or sell at an agreed upon price on a specific date. Trading in futures and options is speculative in nature and there is a substantial risk of loss. These investments are not suitable for everyone, and only risk capital should be used. As with many other business segments, the Internet and technology have opened up this attractive marketplace to a new breed of individual investors and speculators working part-time. You and I can now stand on an even playing field with the largest banks, wealthiest individuals, and trading institutions from the comfort of home.
